ATTY-AGENT-FIRM: Welsh & Katz, Ltd.

ABSTRACT:

When a retrieval condition designating unit designates "data to be retrieved" and "retrieval condition" as data on retrieval of a document, and a classification attribute designating unit designates a "component's name" as data on classification of the document, a structured document retrieving unit first retrieves a structured document group among a plurality of structured documents stored in a structured document storing unit on the basis of the designated "data to be retrieved" and "retrieval condition" and transfers the document group to a structured document classifying unit, which classifies the document group on the basis of the designated "component's name". The result of the classification is displayed on a display unit. Thus, by designating the components constituting a structured document by their component's names, a plurality of structured documents is retrieved and classified on a real time basis.
